

Jagg oil filter adapter gaskets

Background: Over the years there have been a few revisions to the 4600/4700 offset oil filter adapters that have necessitated changes to the gasket patterns.

P/N: GSK OP034060AFM

This gasket was produced for the original 4600 offset oil filter adapters from 1998-early 2000. First produced in Nitrile rubber it was recreated in AFM (Aluminum Foamette Material) in 2003 to replace the original nitrile gaskets that were found to squeeze out of position after time.

The original 4600 used #8-32 screws.

P/N: GSK OP050060AFM

This gasket was produced for the first revision of the 4600 and the introduction of the 4700 offset oil filter adapters from early 2002-late 2003. First produced in Nitrile rubber it was recreated in AFM (Aluminum Foamette Material) in late 2003 to replace the original nitrile gaskets that were found to squeeze out of position after time.

The revised 4600 and new 4700 used #8-32 screws until changed to #10-24 screws in late 2002.

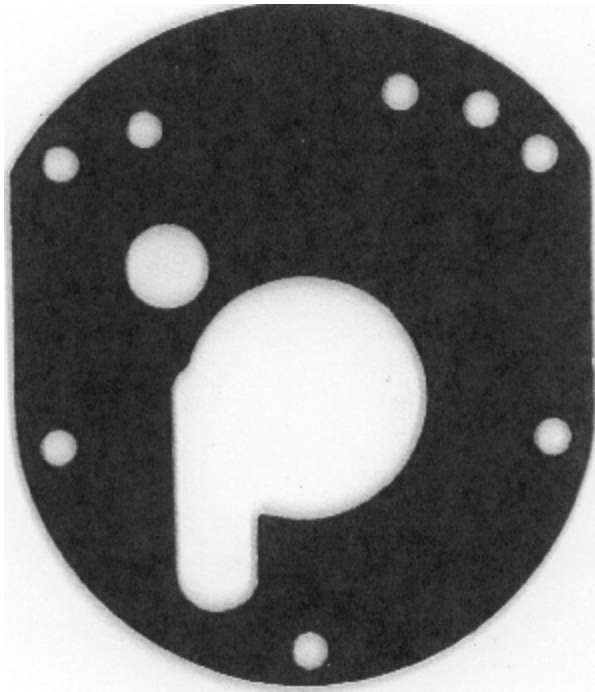

P/N: GSK OP070060AFM

This gasket was produced for the 2nd revision of the 4600, and the 1st revision of the 4700 in late 2003-early 2009. This gasket was always produced in AFM (Aluminum Foamette Material). Very early versions of this gasket were produced with symmetrical top holes. It was determined that the symmetrical top holes could allow the gasket to be installed backward. Therefore, the 4600/4700 and this gasket were revised to offset the top holes to ensure gasket could only be installed properly.

P/N: GSK OP077060AFM

This gasket is commonly referred to as the "dual" because it was originally and always produced from AFM to replace both versions of the GSKOP070060AFM. It was designed be sold in kit GK4600 (Gasket Service Kit for 4600/4700 offset oil filter adapters) and it was determined would satisfy the gasket service/replacement need for the bulk of adapters on the market. GK4600 kits include a gasket and large-o-ring. This gasket is interchangeable with the GSKOP070060AFM.

P/N: GSK OP288060AFM

This gasket was only produced in AFM for the 3rd revision of the 4600, 2nd revision of the 4700 in early 2009-present. These revisions placed all screws on the same side of the offset oil filter adapters and eliminated unnecessary gasket passages in favor of favorable stamping finish.

This gasket was designed to replace:

GSK OP070060AFM

GSK OP077060AFM
